Writing "Learning through books"

English history and culture are the subjects that must be cognised through books of different native authors, who can provide you with profound insight into country's peculiarities.

In my opinion, the most noteworthy book about England of the 19th century is "The portrait of Dorian Grey". The plot tells us about the fate of a young man, named Dorian, who was lured into deceptive faith of Lord Henry, the man, who hastened to decaying of Dorian's soul. As the story unfolds, the reader starts to plunge into brilliantly described english atmosphere. We can actually experience being in a theatre alongside main character watching performance of fascinating Sybilla Vein.

It is important to notice, that the author reflects the most popular activities among the privileged circle of english society. One of them is visiting theatre and watching various performances such as "Romeo and Juliette" and many others.

Another thing is presenting at the meetings of the richest and most intelligent part of english society, which Dorian and Lord Henry regularly attended.

Personally, I adore the reflection of the highest part of society in the book. The way author reveals its sins makes me willing to more about english culture, notably about its famous people.

In conclusion, I would like others to take my suggestion into consideration, because this book provides learners of english history and culture with opportunity to take a deep look into England of the 19th century.
